Text on screen: If there are LED Lighting and Smart Lighting Management System...

Scene: Ming and grandma are on the way home after dinner.....

Grandma: Ming, the street seems to be brighter at night recently.   The objects on the street are clearer. Is my eyesight improved?

Ming: Grandma, the street really seems to be brighter than before!

(Ming looks at the front, and looks at the back)

Grandma: Ming, watch out!   There is a carton in front of you!

(Ming almost stumbled)

Ming: Grandma, thank you for reminding me.

I think it's not just because of your eyesight improvement. Highways Department recently replaced the street lights on the whole street with LEDs as well!

(Ming points to the street light overhead)

(Grandma then looks at the lamppost.)

Grandma: Really!? Is there anything special?!

Ming: In addition to being more energy-efficient than traditional street lights, the newly replaced LED street lights also have better lighting quality.   The high colour rendering of LED means that under the same luminosity, objects can be shown more clearly, thereby enhancing road safety and visual comfort!

Grandma: No wonder!   But will it be broken easily?

Ming: No, LED street lights is more durable than traditional street lights.   All LED street lights are connected to the "Smart Lighting Management System".   If the LED street lights are broken, the street light maintenance team will be notified immediately, facilitating the arrangement of repair works.

Grandma: LED street lights are so good, why not replace the lights in our homes with LED light bulbs!
